Web Development (EGL144) Project

My Personal Portfolio Website

1. Objectives

This project requires students to develop a web site based on the design concept submitted for EGL162 module. It is an individual based project work which constitutes **30%** of the overall grade for this module EGL144.

2. Project Theme

Create a personal **portfolio website** to showcase yourself, your works and allow people to contact you. This website is all about promoting yourself. You are your own brand and identity. The design of the webpages should be based on the design submitted for EGL162 (marks will be deducted for HUGE contrasting implementation).

3. Target Audience

Prospective employers, lecturers, friends and members of the public who want to know more about you. This platform will be used to showcase what you are good at and what you can do (useful for employment seeking).

4. Project Description

You are to develop at least have FOUR pages consisting of the following content. The appearance should be as close as possible to the designs submitted for the EGL162 module:

- Home
  - An icon image on top of the page as the site logo
  - Consists of Navigation menu with links to appropriate pages/sections
  - Introduce yourself
- Portfolio
  - Information (images and descriptions) of all the projects that you have completed (including non-course related projects)
- About Me
  - A series of photos and text to showcase your hobbies and demonstrate your character and strengths
- Contact Details
  - Your contact details
  - Include a form to send comment/message/feedback etc.
  - The completed form can be sent to the server at http://qna.nyp.edu.sg/EG1744/Form/ (only available within NYP)

5. Mark-up Language/Programming Language

HTML and CSS are to be used in the development of the web site. You are to apply all that you have learnt in this module to develop your web site.

6. Deliverables

Refer to section 4 of the specifications Your personal portfolio site must be original in its design.

* Plagiarism will be penalized

7. Submission

In **Week 16** during the F2F lab session, you are to demo and submit your project. All your files (html, css, images) in their respective folders, must be placed in a single folder:

Name of folder: **ModuleGroup_AdminNo_Name_Project** ,

e.g. L8_201234A_ChngSuatHoon_Project

Zip the folder and submit to Blackboard, Project, Submission

8. Assessment

Students are encouraged to strive to achieve the following for their web site:

- Web page(s) must be saved as **.html** extension, and contain textual information, still and/or animated images, audio and even video.
- Use ***index.html*** as the landing page (home page)
- Store all resource files in appropriate sub-folders, e.g. store all image files in a sub-folder named "**images**" under your main folder
- Web page should appear in the **middle of the screen (browser)** if the design does not occupy the entire width of the browser
- Use **relative addressing** for references to internal pages, images and css files
- Use a common **CSS** to control the look and feel of the website (consistent look and feel)
- Use padding/margin to space out content
- Web page should not contain excessive whitespaces (space with no content)
- Ease and clear of navigation with no broken links
- Validate enquiry form using HTML5 validation
- Contain Informative and interesting content
- Originality of work
- All HTML and CSS are validated via http://validator.w3.org/ and http://jigsaw.w3.org/css-validator/

9 Project Deadline

The project is due on **Week 16 F2F lab session**.

Marks will be deducted for late submissions, 10 marks for each day after the due date. You should aim to finish your project early to allow some buffer time for unexpected delay, another new variant of covid, anything can happen – trust me.
